

# SF-902

## The Quick-Change Engine Dynamometer

Use the SF-902 for testing OEM and high-performance automotive, motorcycle and snowmobile engines in production-oriented environments.

Rapidly test engines with SuperFlow's SF-902 dynamometer system. The SF-902's engine stand and dynamometer can now be configured as a single roll-around unit like the SF-901, or as a docking dynamometer.

 **SuperFlow**

Shown with optional components.

**SuperFlow dynamometers are ideal for testing high-output engines using nitrous oxide, alcohol, superchargers and turbochargers making up to 2,000 horsepower (1,500 kW).**
